

BACKUP-AS-A-SERVICE

Highlights

- Instantly recover your physical and virtual infrastructure
- Reduce backup storage requirements of up to 80 percent
- Proactively perform Recovery Data health checks
- Restore server images to dissimilar hardware

The success of backups is measurable. Are your restores measuring up?

Hardware failures, user errors, and other disasters can compromise your data and users' productivity. Delayed backup and recovery windows expose production environments and applications to unnecessary downtime and loss.

**Are your backups Disaster Recovery ready?
Are your restores at risk?**

Our service is an all-in-one backup and Disaster Recovery solution that provides recoverability. Data verification and recovery testing can be conducted regularly to ensure that you can recover successfully.

Strengthen your environment and DR capabilities by:

- Instantly recovering your physical and virtual infrastructure from a secondary recovery site or a Converge Data Center
- Reducing backup storage requirements of up to 80 percent and eliminating backup windows and jobs
- Enabling access to data volumes to users during recovery
- Proactively performing recovery data health checks for recoverability
- Restoring server images to dissimilar hardware, to your virtual environment, or to the Converge virtual infrastructure

Contact us today to ensure Disaster Recovery readiness of your restores.
